Definition of variables and format used in the GLOF database. [STR a string; INT an integer; * cases where only inputs from a predescribed list are possible; NA if unknown; + if exact number is unavailable; Y - Yes; N - No].

Variable	***Format***	***Description and unit***
GF_ID	INT	Unique identifier for each individual event, starting at 1.
Year_approx	STR	Year of occurrence; given approximately if GLOF has been identified from imagery with no definite account.
Year_exact	INT	Exact year of occurrence.
Month	INT	Month of occurrence.
Day	INT	Day of occurrence.
Lake_name	STR	Local name of the lake, if available.
Glacier_name	STR	Local name of the glacier associated with the lake, if available.
GL_ID	STR	Unique identifier for the lake.
G_ID	STR	Unique identifier for the glacier (GLIMS format) associated to the lake.
LakeDB_ID	INT	Identifier in which lakes database the lake has been mapped. 2-Wang2020 (1990); 3-Wang2020 (2018); 4-Chen2021
Lat_lake	INT	Decimal degrees latitude of lake [°, WGS 84].
Lon_lake	INT	Decimal degrees longitude of lake [°, WGS 84].
Elev_lake	INT	Elevation of lake [m a.s.l.].
Lat_impact	INT	Decimal degrees latitude of lowest known impact of the GLOF [°, WGS 84].
Lon_impact	INT	Decimal degrees longitude of lowest known impact of the GLOF [°, WGS 84]
Elev_impact	INT	Elevation of lowest known impact of the GLOF [m a.s.l.].
Impact_type	STR*	Quality of impact record; 'Observation' refers to lowest observed high flow or damages; 'Deposit' refers to lowest visible deposit of sediments (from satellite imagery). Impacts are therefore conservative and are likely always further downstream than recorded.
Lake_type	STR*	Type of lake (e.g., moraine dammed, ice dammed, bedrock etc.).
Transboundary	STR*	Denotes if impact is potentially transboundary.
Repeat	STR*	GLOF that occurred again in past or future.
Region_RGI	STR	Region ID as used in the RGI 6.0 (Pfeffer, 2017).
Region_HiMAP	INT	Region ID as used in the HiMAP report (Bolch et al., 2019).
Country	STR	Current national borders (2022) the source lake lies in.
Province	STR	1st level province name.
River Basin	STR	River basin the lake is located in.
Driver_lake	STR*	Driver that caused the lake to form.
Driver_GLOF	STR*	Driver that caused the GLOF to occur.
Mechanism	STR*	Mechanism involved in lake breach or drainage.
Area	INT	Lake area [m^2].

Variable	***Format***	***Description and unit***
Volume	INT	Volume of the drained lake water [m^3].
Discharge_water	INT	Measured or estimated water discharge downstream [m^3s^{-1}].
Discharge_solid	INT	Measured or estimated debris flow discharge downstream [m^3s^{-1}].
Impact	STR	Narrative description of downstream impacts.
Lives_total	INT	Total lives lost.
Lives_male	INT	Total male lives lost.
Lives_female	INT	Total female lives lost.
Lives_disabilities	INT	Total lives of people with disabilities lost.
Injured_total	INT	Total injured.
Injured_male	INT	Total male injured.
Injured_female	INT	Total female injured.
Injured_disabilities	INT	Total people with disabilities injured.
Displaced_total	INT	Total people displaced.
Displaced_male	INT	Total male displaced.
Displaced_female	INT	Total female displaced.
Displaced_disabilities	INT	Total people with disabilities displaced.
Livestock	INT	Livestock lost.
Residential_destroyed	INT	Number of residential houses destroyed.
Commercial_destroyed	INT	Number of commercial houses destroyed.
Residential_damaged	INT	Number of residential houses damaged.
Commercial_damaged	INT	Number of commercial houses damaged.
Infra	STR	Other destroyed infrastructure.
Agricultural	INT	Area of farmland destroyed [m^2].
Hydropower	INT	Installed hydropower capacity destroyed [MW] .
Econ_damage	INT	Total economic damage [USD].
Sat_evidence	STR	Image IDs used as satellite imagery evidence.
Ref_scientific	STR	Citation of scientific source.
Ref_scientific_full	STR	Full references to the scientific sources.
Ref_other	STR	Description of other sources.
Remarks	STR	Any other remarks.
